Comment by Michael Klostermann [07.10.2016]
i removed the lower case letter in the training data and the final classifier does only contain the correct chars. Please check again with the coming nightly! read_ocr_class_cnn ('Universal_0-9A-Z+_Rej.occ', OCRHandle) get_params_ocr_class_cnn (OCRHandle, 'characters', Classes)
Comment by David Sattlegger [10.10.2016]
After the lower case "l" has been removed and the font retrained from scratch, I tested it again, see https://confluence.mvtec.com/display/EN/Evaluation+of+the+Universal+CNN+OCR+Classifier#EvaluationoftheUniversalCNNOCRCClassifier-Subset0-9A-Z+
